Education

Instituto Tecnológico de Costa Rica San José, SJ
Bachelor of Computer Engineering, Weighted Average: 90.21 Graduation Date: 2027

Career Interests

Computer Engineering student seeking a Software Development internship to apply my experience in backend and frontend development, REST APIs, and database management while contributing to real-world projects and expanding my technical skills.

Experience

Reporting and Development Services (RDS) Cartago, La Unión
Intern Web Developer Aug 2025 - Jan 2026

- Developed and maintained RESTful backend services using Node.js and MongoDB, supporting features/endpoints across the application.
- Built responsive, reusable frontend components with AngularJS, improving the user experience of internal web applications like Maximus.
- Collaborated with a team of 7 developers using Git and JIRA to track tasks, and deliver features on schedule.

Skills

- **English:** Advanced
- **NodeJS:** Server-side JavaScript
- **Git:** Version control
- **MongoDB:** NoSQL databases
- **Communication:** Clear, concise
- **Programming Languages:** Go, Python, C, C++, JavaScript.
- **JIRA:** Agile task tracking
- **Web development:** Frontend and Backend
- **Teamwork:** Cross-team collaboration
- **Problem Solving:** Analytical debugging
- **Adaptability:** Quick learner

Projects

Personal Portfolio Website | Angular, TypeScript, HTML, CSS

- Developed a personal portfolio website using **Angular** and **TypeScript** as part of a course assignment.
- Designed a scalable and maintainable structure to continuously expand the portfolio with new projects, skills, and professional experience.
- Applied **Git** and **GitHub** for version control and project management, with the goal of evolving the project into a professional portfolio.

File Compressor in C

- Developed a file compressor and decompressor in C using Huffman coding, producing custom .huff files.
- Implemented three versions of each tool(serial, multi-process with fork, and multi-threaded with pthreads) to compare performance.
- Wrote a Python script to download the 100 most popular books from Project Gutenberg, used as a test dataset.

Blinky

- Blinky is a Go-based desktop file synchronization application using Fyne, implementing directory navigation, file selection, and persistent synchronization preferences.
- Implemented a custom linked-list data structure to efficiently manage and persist user-selected file paths for synchronization.
- Integrated Microsoft OAuth and OneDrive API functionality with system-level synchronization concepts using Linux systemd timers, exploring secure cloud authentication and automated background file synchronization.
